Povzetek

Predstavila bom možnosti uporabe IKT pri delu z otroki s posebnimi potrebami. Osredotočila se bom predvsem na otroke z disleksijo. Raziskovala bom možnosti, ki nam jih ponuja tehnologija, dosegljiva po svetu in pri nas, ter obenem opozorila na možnosti, ki nam jih ponuja že sam osebni računalnik. Navedla bom pravila, ki jih moramo upoštevati pri oblikovanju besedila za učence z disleksijo ter na kaj moramo biti pozorni pri oblikovanju spletne strani za isto skupino otrok. V zaključku bom spregovorila o preslabi usposobljenosti specialnih pedagogov in učiteljev, ki smo vse prevečkrat prepuščeni lastni iniciativi in samoizobraževanju.

Prav tako je vidno pomanjkanje ustrezne opreme in prešibka povezanost strok.

Abstract

I will introduce the possibilities of using ICT when working with children with special needs and will mostly focus on children with dyslexia. Moreover, I will also research the possibilities that technology all over the world and in Slovenia and then throw light upon the possibilities a personal computer offers. I will list rules which should be abided when forming texts for children with dyslexia, but also how to design websites for children with such disorder.

In the end I will talk about non-qualified teachers, who are left to self-initiative and self-education. There is also a lack of appropriate equipment and a too weak connectedness among the children.
